

Internal Medicine Case Studies

As part of this university's Top University Project, we invited Dr. Gerald Hsu currently from University of California, San Francisco where he is an assistant clinical professor of medicine. His specialty is hematologic and oncologic diseases. During his week at TMDU we have planned a variety of activities, one of which is these lunchtime seminars for clerkship students, interns and residents. This is a wonderful opportunity to practice the differential diagnosis approach to treating medical conditions. Please join us and actively participate in the discussions. Lunch is not provided, but feel free to bring yours and eat while learning.

Medical staff and TMDU faculty are also welcome to come and join in the learning process. Please join us in the sharing of knowledge.
